

Error during Land Cover and Soils Parametrization

Posted by garbossa - 2009/12/10 11:54

Hello,

I'm trying to use K2 with AGWA in a watershed in south Brazil. I would like to have some help

The first steps of the watershed construction were ok. Now I'm in the Parametrization stage.

For the Land cover I have used a land cover map that I have here and have the VALUE column. I also have created a LC_lookup table with the corresponding values in the CLASS column.

I'm using the FAO Soil map for South America.

When I try to run the Land Cover and Soils Parametrization, the following error appears:

"An error was encountered getting the unique soil types in the discretization-soils intersection"

I would like to know if someone has the same problem, or knows what it refers to.

Also I would like to know if there is a list of the errors that we may find.

Thankyou

Hi Garbossa,

I just noticed I replied to you in another thread. It looks like in the other thread that you were able to run the model but not successfully, so I'm guessing you have gotten past the Land Cover and Soils Parameterization error?

Shea
